AIM

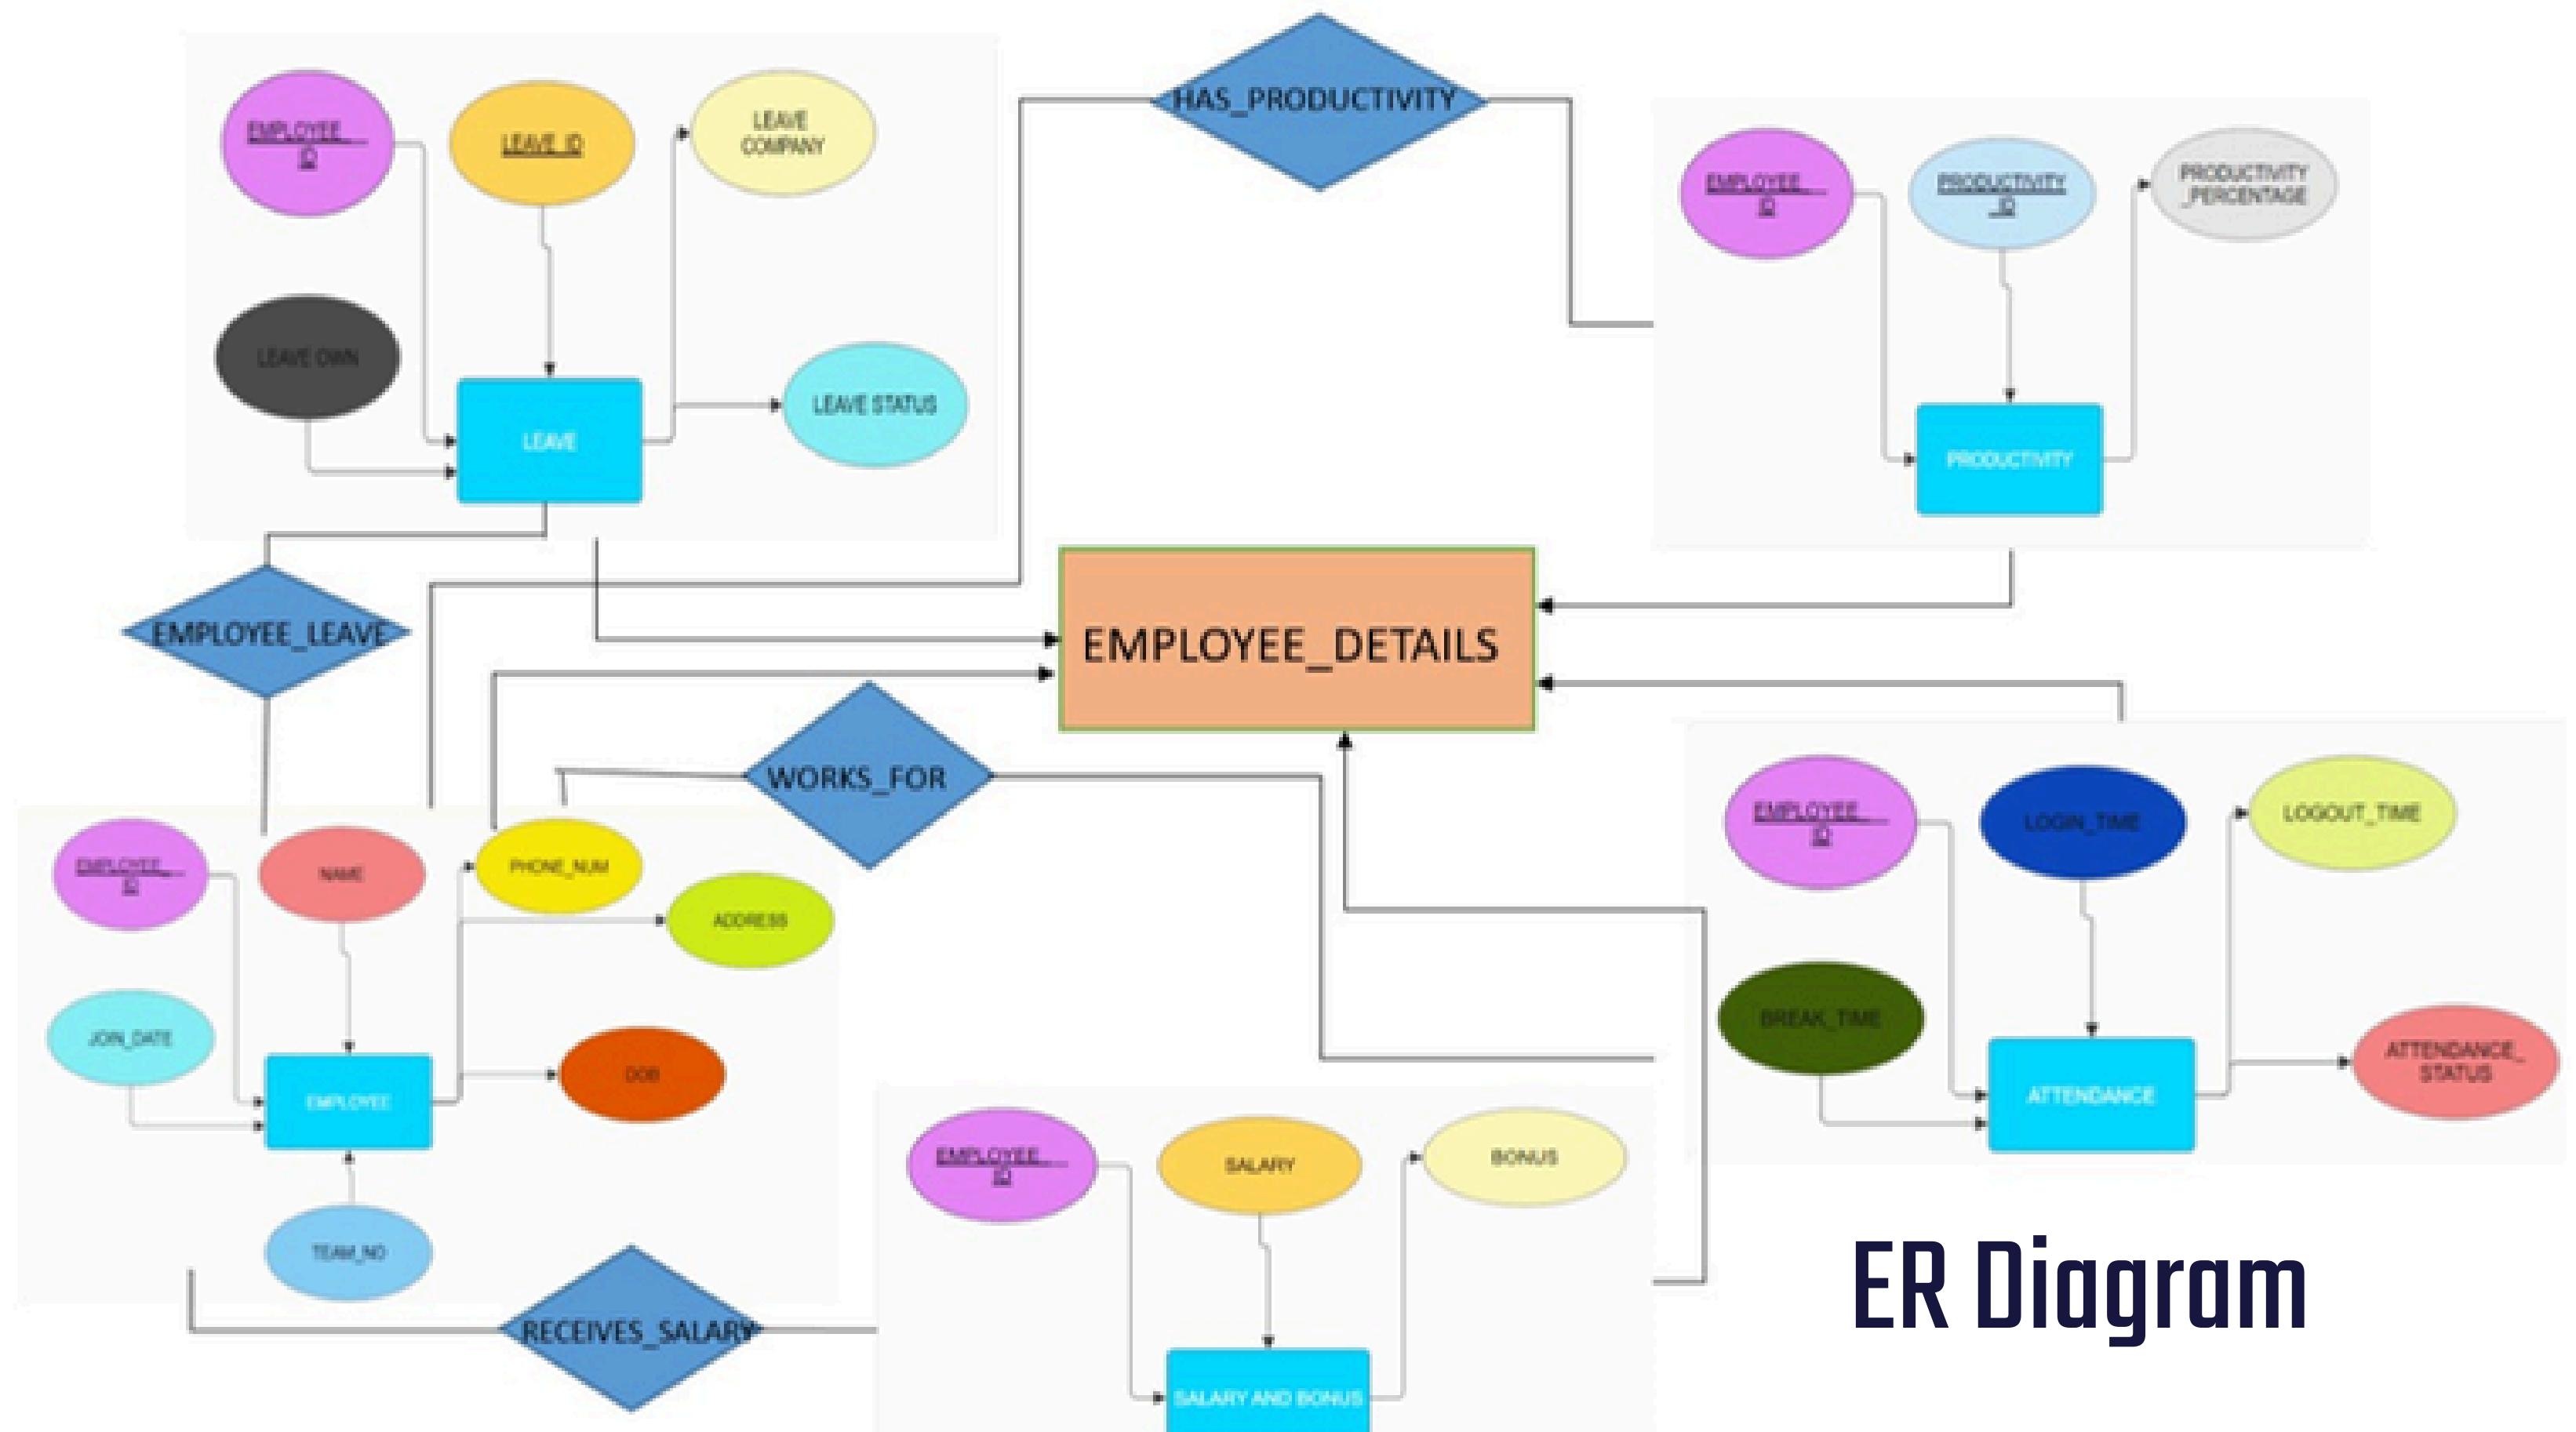

To develop an efficient employee timesheet management system that enables accurate tracking of work hours, streamlines payroll processing, and enhances productivity by providing a user-friendly interface for employees to log their hours and for administrators to manage and analyze timesheet data.

MOTIVATION AND GOALS

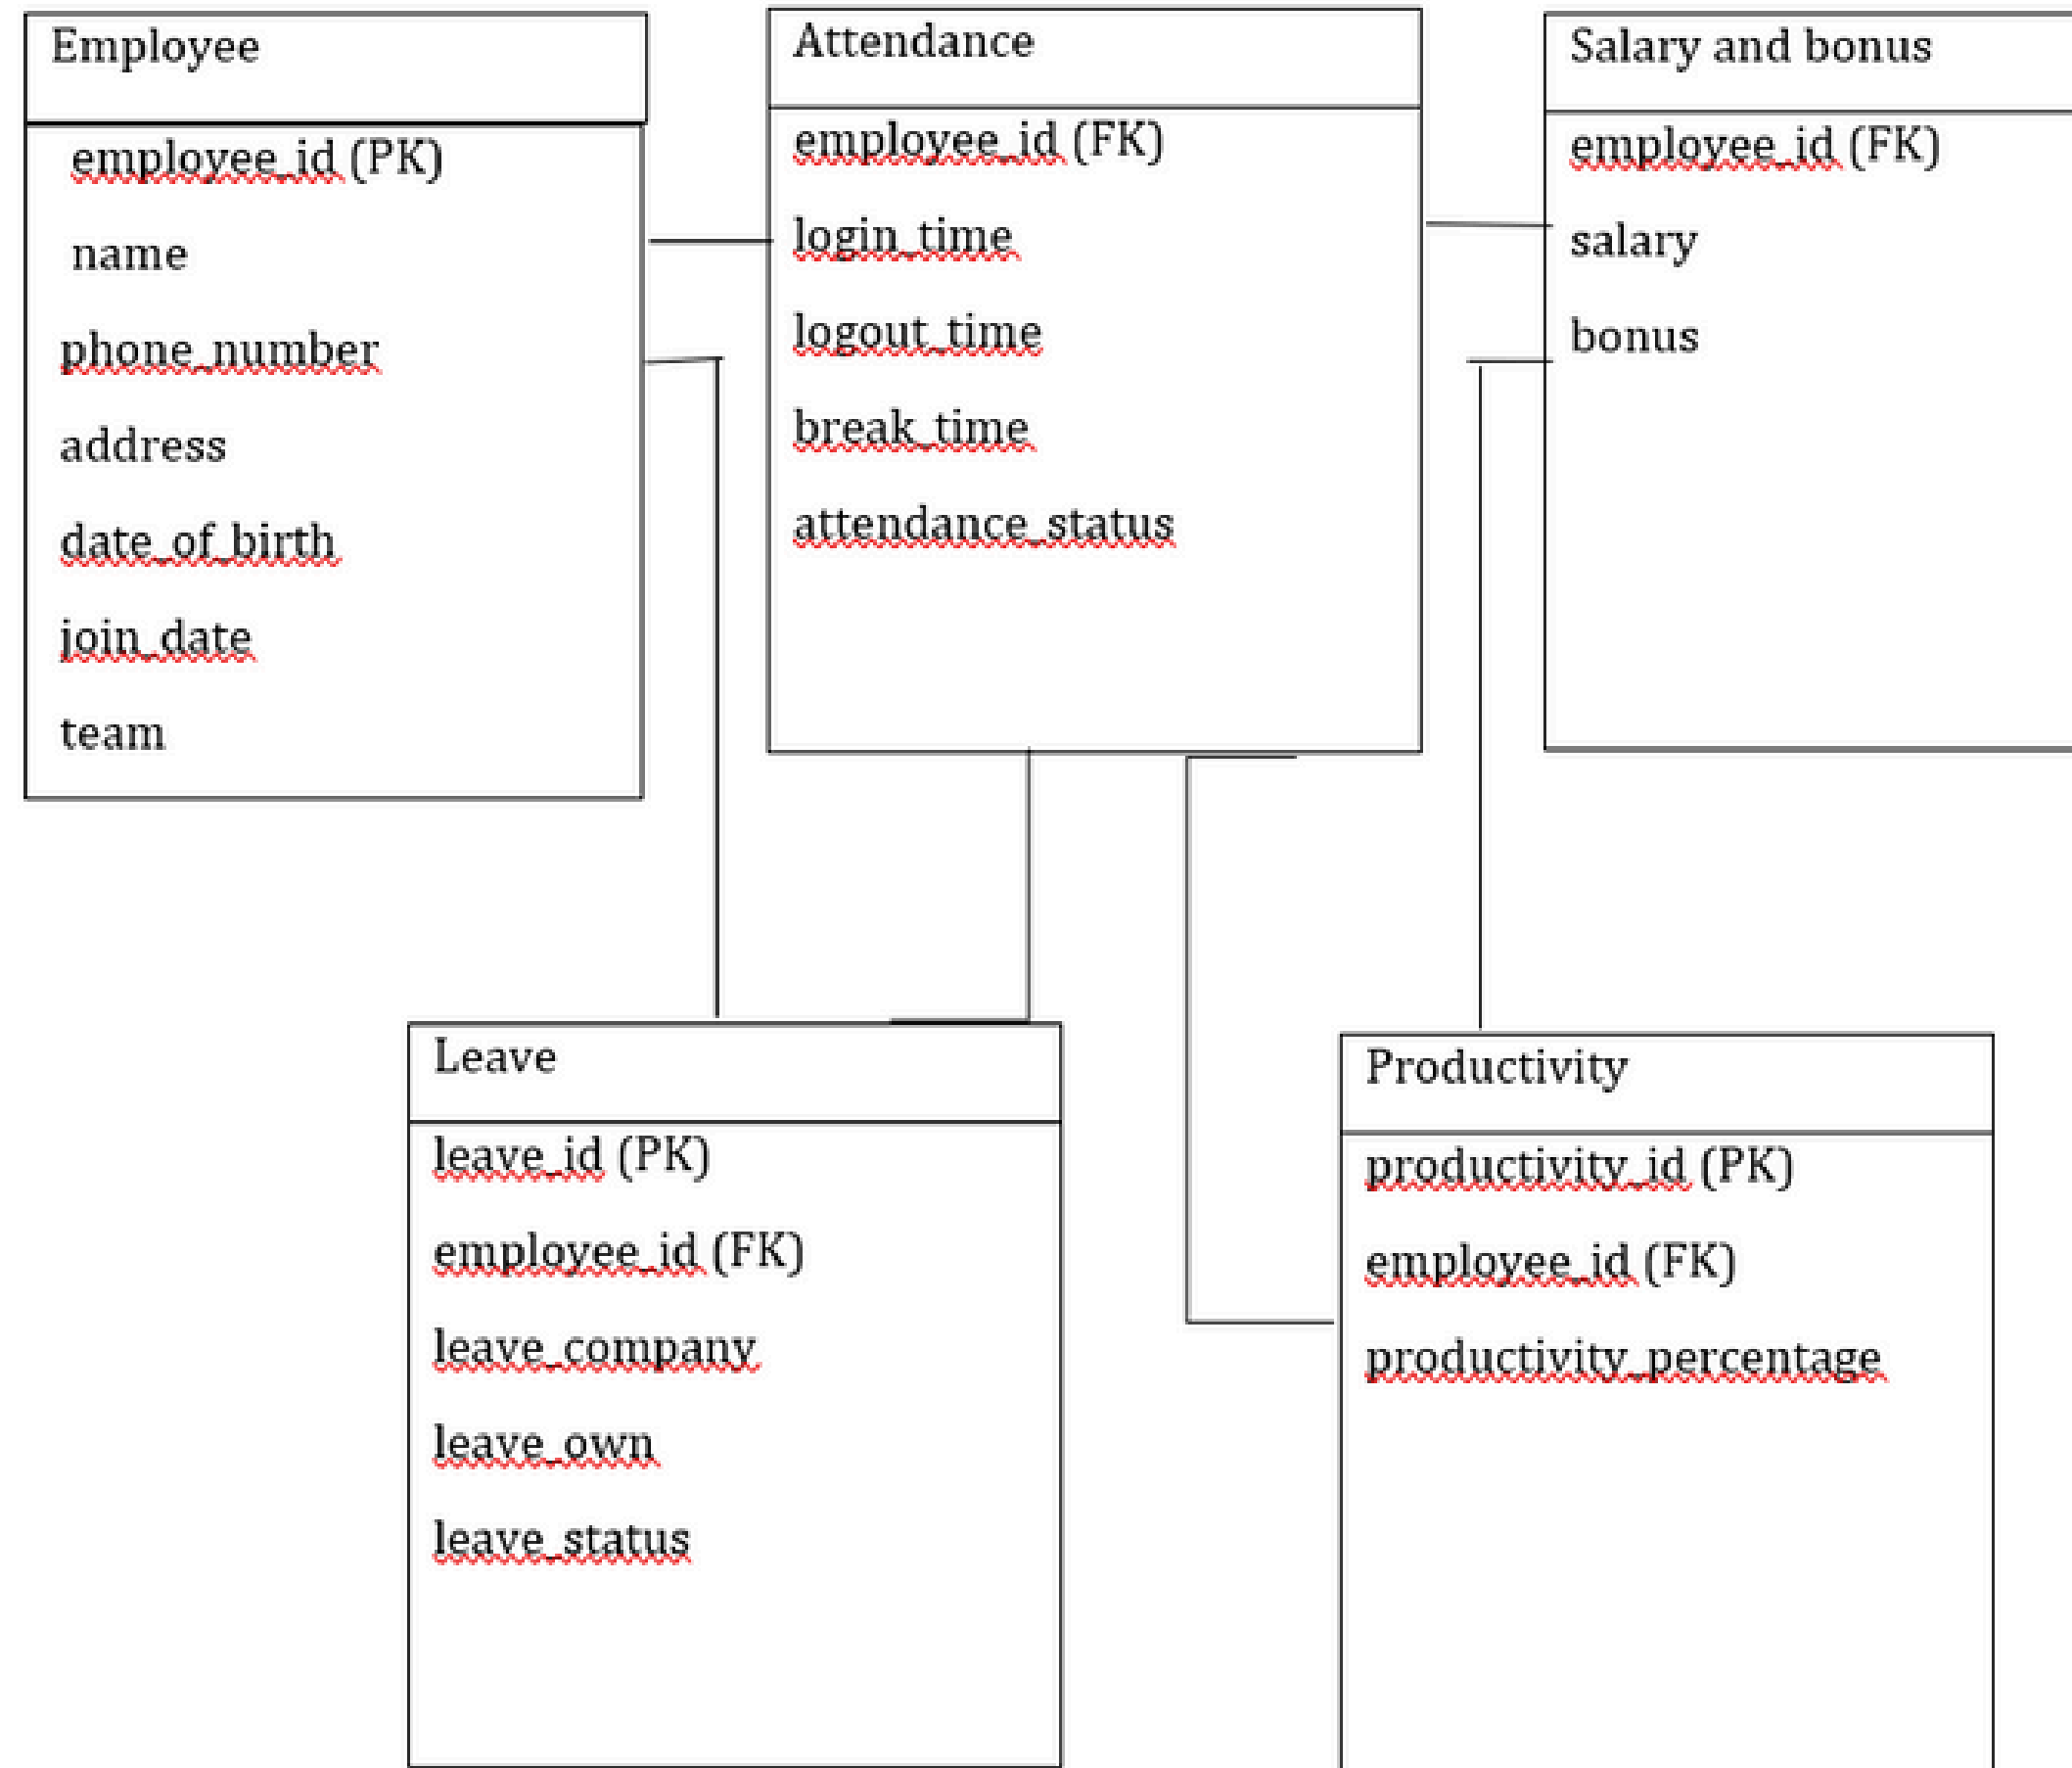

The Employee Time Sheet Management System was inspired by the need for an efficient way to track employee working hours, attendance, leaves, and productivity. Many companies struggle with manual time tracking, which leads to errors and inefficiencies. This system automates attendance logging, monitors employee performance, and calculates salaries based on working hours and productivity. The goal is to improve workforce management, reduce payroll errors, and enhance employee accountability. It helps organizations streamline operations and make data-driven decisions.
